To the FCC: I urge you to reject NAB's petition 04-160. I have been an XM listener for over a year. Have purchased three additional systems for my family. This is the best thing to ever happen to commuter driving. The selection of programs, music, news, sports etc. without all the repetitive talk and commercials. I recently had the opportunity to be traveling and found the local weather and traffic information very helpful. No local station offers this service. I am willing to pay for the service offered by XM and object to the NAB's stand. Leave Satellite radio alone, it represents the kind of innovation that makes the world we live in better.
